

Syntax Design & Architecture Consulting Services

Add New Cloud Services Efficiently and Cost-Effectively

As organizations look for new ways to innovate and work more efficiently, many embrace cloud-based solutions and services. Yet it's all too easy for a group or business unit to adopt a new cloud service without understanding the organization's existing cloud footprint. And that can result in unnecessary duplication of effort, increased costs, greater complexity, and higher risk. Syntax can help.

Keep Your Cloud Footprint Lean and Efficient with Syntax Design & Architecture Consulting Services

Syntax Design & Architecture Consulting Services will help your organization add the new cloud applications and services it needs to succeed—without unnecessary cost and complexity.

We work with you to determine the right architecture you'll need to get your new workload running on the hyperscaler of your choice: AWS, Azure, Google Cloud, or OCI. We also explore your existing cloud footprint to identify the applications and services you already have—from databases and directory services to access control tools and beyond. This ensures you can reuse what's already in place to optimize cloud costs and efficiency.

The Syntax Design & Architecture Process

A Syntax Design & Architecture engagement is fast: in as little as one week, you'll have what you need to get your new cloud application or workload up and running.

- We begin with a personal approach, meeting with the new solution's technical and application owners to better understand the workload and business needs.
- We investigate the hyperscaler where you want to put the new workload and assess the services and applications already in place and ready for reuse and integration with the new solution.
- We create a high-level design and technical reference documentation that your IT team can use to implement the new workloads and integrate it into your existing cloud environment. Syntax also offers implementation and ongoing managed services for organizations requiring assistance beyond our Design & Architecture services.

Some hyperscalers may provide funding to support the changes required as part of implementing the Design & Architecture recommendations, as these may be a redesign or upgrade of existing, deployed cloud services.

Organizations with workloads deployed in the cloud for a year or more may also want to learn more about our Syntax [Well-Architected Reviews](#), which ensures the cloud infrastructure you implemented in the past meets current and anticipated needs.

Benefits

- Improve cloud performance
- Optimize cloud infrastructure costs
- Capitalize on hyperscaler innovations, including new features and services
- Reduce cloud-related risks
- Eliminate duplication of cloud infrastructure
- Establish good cloud architecture habits
- Best practices with on-premises and multi-cloud integrations

Why Choose Syntax

Syntax delivers boutique advisor service at global scale. Backed up by the Syntax Cloud Center of Excellence, our professionals have years of experience working with our clients' most mission-critical environments and bring you specialized knowledge and experience with all major cloud technologies and hyperscalers.

Ready to Add a New Cloud Service—and Do It Right?

Want to make sure you bring a new cloud application or service online without adding unnecessary costs and duplicate functionality? Syntax can help. Our professionals will work with you to design an architecture that integrates your new workloads with the applications and services you already have in place. [Contact us today](#) and discover how Syntax Design & Architecture Consulting Services can help you make the most of your cloud strategy and investment—quickly and efficiently.

About Syntax

Syntax provides comprehensive technology solutions and trusted professional, advisory, and application management services to power businesses' mission-critical applications in the cloud. With 50 years of experience, 800+ customers around the world, Syntax has deep expertise in implementing and managing multi-ERP deployments in secure private, public, or hybrid environments. Syntax partners with SAP, Oracle, AWS, Microsoft and other global technology leaders to ensure customers' applications are seamless, secure and at the forefront of enterprise technology innovation.
