

## Syntax SSO Accelerator

# Enhance Security with Oracle Identity and Access SSO Management for EBS

### The Identity Management Challenge

The world of the remote workforce has forever altered how businesses balance how they secure their assets while enabling business to thrive. Oracle Cloud Infrastructure and Identity Access Management (OCI IAM) is a cloud-native service providing holistic coverage of identity and access use cases for employees, partners, and consumers enabling management of authentication and entitlements across a wide range of cloud and

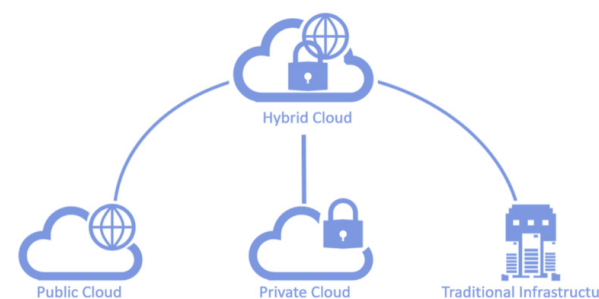

on-premises applications. OCI IAM helps position identity as the security perimeter across ever-expanding ID landscapes.

Oracle recently merged the capabilities of Oracle Identity Cloud Service (IDCS) into the native OCI IAM service. Take advantage of this IAM Accelerator Service delivered by Syntax to modernize your approach for a Single Sign-On (SSO) platform to manage users, applications, and data access through the cloud.

Oracle's industry-leading, comprehensive IAM platform protects users, data, and applications while providing business resiliency and thorough governance across cloud environments. The Syntax SSO Accelerator for EBS starts with the Oracle Access Management SSO features and can grow from there.
