

Syntax Supply Chain Execution Services for SAP

Empowering your warehouse, yard, and transportation operations with solutions that perform reliably—every day, in every condition

Overview

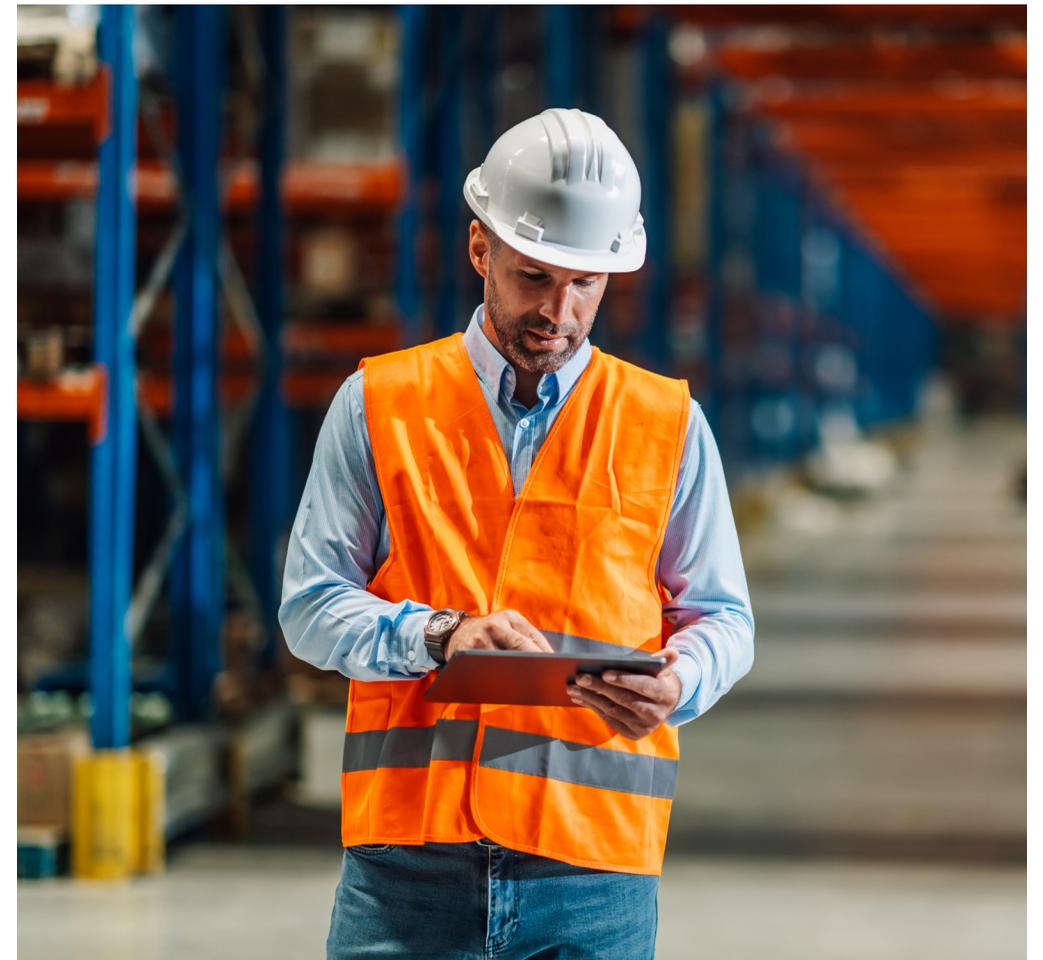

Modern supply chains face mounting complexity—tight labor markets, constant demand shifts, and pressure to deliver faster and smarter. Legacy systems and disconnected processes often slow down execution across the warehouse, yard, and transport network.

Syntax Supply Chain Execution Services for SAP modernize how your supply chain performs end-to-end. Combining deep operational expertise with SAP proficiency, we design, build, and deploy logistics solutions that perform consistently on the warehouse floor, in the yard, and across transportation networks.

From planning and blueprinting through go-live and continuous improvement, Syntax ensures your operations run with accuracy, scalability, and everyday ease.

Our Services

- Supply chain assessments and solution roadmaps
- SAP Extended Warehouse Management (EWM), Transportation Management (TM), Yard Logistics (YL), and Logistics Master data design, cleansing, and migration
- Mobility enablement (RF scanning, voice workflows, and device optimization)
- Integration, Material Flow System (MFS) and PLC automation, and custom development
- Training, organizational change management, and operational readiness simulations
- Go-live orchestration, hypercare, and post-deployment optimization

Our Approach

Built for Real-World Logistics

Syntax's methodology is designed for the realities of supply chain execution, where success depends on accuracy, data integrity, and real-world validation. Our teams combine consulting discipline with hands-on operational engagement to deliver solutions that work from day one.

1. Visit and Assess

We start on-site by observing your processes, meeting your teams, and understanding how your facilities and workflows operate. This firsthand view reveals operational nuances, cultural factors, and physical constraints that drive project success.

2. Plan and Quote

Together we define your SAP roadmap by aligning goals, KPIs, and execution capabilities. Our planning process future-proofs your architecture and creates a clear path toward measurable business outcomes.

3. Playback and Discover

We validate requirements through playbacks, workshops, and prototypes. This phase creates your Business Process Master List (BPML), fine-tunes scope, and ensures every detail reflects how you actually work—verified right down to the warehouse and shop floor.

4. Build and Test

Our experts configure, develop, and integrate your solution in close partnership with your delivery teams and users. Every iteration is tested in real scenarios, reducing risk and eliminating surprises before go-live.

5. Manage Change, Train, and Deploy

We prepare your people for success through role-based training, simulation exercises, and full cutover rehearsals that showcase the change before it is productive. Your teams enter go-live confident in both system and process.

6. Go Live and Support

Syntax provides on-site, hands-on guidance during launch—resolving issues in real time and stabilizing operations fast. Post go-live, our hypercare and performance monitoring keep your system optimized as it transitions to steady state.

Benefits

- **Proven Reliability:** Solution designs built for real-world warehouse, yard, and transportation performance.
- **Faster Deployments:** SAP-aligned templates and tested methodologies accelerate rollout with predictable outcomes.
- **Empowered Teams:** User-friendly interfaces, automation, and mobile workflows reduce manual effort and boost productivity.
- **High Data Quality:** Master data integrity woven into every implementation phase delivers lasting accuracy.
- **Unified Visibility:** Connected warehouse, yard, and transport processes provide real-time insights and control.
- **Scalable Growth:** A flexible execution foundation that evolves as your business expands—across sites, systems, and technologies.
