

Move your SAP documents and data to the cloud to cut costs, ensure compliance, and unlock innovation

- Move SAP documents, archives, and data to secure cloud storage
- Reduce database size and total cost of ownership
- Ensure compliance and unlock analytics and AI on your SAP data

Overview

As SAP data volumes grow, organizations face inflated database sizes, rising costs, and slower performance, while retention and compliance requirements add complexity. Meanwhile, valuable SAP data often stays locked away, out of reach of the analytics and AI initiatives that could put it to work.

Syntax CxLink is a suite of solutions connecting your SAP system to cloud storage and services from hyperscalers. Installed as SAP add-ons with no intermediate servers, CxLink offloads documents and data to secure, cost-effective cloud environments, reducing TCO, maintaining compliance, and making SAP data ready for analytics and AI.

What's in Syntax CxLink

Syntax CxLink for ArchiveLink

Integrates your SAP system with cloud storage for efficient document archiving. Using the SAP ArchiveLink protocol, documents are offloaded from your SAP database to secure, scalable environments such as AWS, Microsoft Azure, or Google Cloud. This reduces database size, cuts operational costs, and eliminates intermediate servers, while maintaining full compliance.

Syntax CxLink Data Lakes

Replicates SAP data to AWS or Azure so you can unlock its full potential for analytics, machine learning, and AI. A single serverless SAP add-on manages both offline and real-time data feeds to cloud data lakes, without compromising compliance or data protection, and supports enrichment from external sources to sharpen decision-making.

Syntax CxLink for ILM

Enhances SAP Information Lifecycle Management by connecting it to scalable cloud storage such as AWS. It applies rule-based retention to control how long data is stored and when it can be destroyed, helping businesses manage data across its full lifecycle in line with tax, product liability, and audit requirements.

Syntax CxLink for CMIS

Connects SAP Cloud ERP to AWS through a CMIS server deployed on SAP BTP. Communication runs over standard CMIS and REST services, so SAP documents can be stored and retrieved in the cloud with no custom development or proprietary connectors, giving you a simple, secure, standards-based path to the cloud.

Benefits

- **Reduced TCO:** Offloading SAP documents, archives, and data to the cloud shrinks database size and drives significant, ongoing cost savings.
- **Zero IT footprint:** Every CxLink solution installs as an SAP add-on in your own ERP system, with no intermediate servers between SAP and your cloud provider.
- **Analytics and AI readiness:** Centralizing SAP data in the cloud removes silos and makes it available for analytics, machine learning, and AI across the business.
- **Security and compliance:** Built with encryption, access control, and rule-based retention to help meet applicable data and document retention regulations.

About Syntax

Syntax is a leading global technology solutions provider driving enterprise transformation in the cloud. We help organizations modernize mission-critical applications through AI-enabled innovation, industry-tailored outcomes, and end-to-end solutions across strategic advisory, implementation, and managed services. Through our Boutique @ Scale approach, we tailor every engagement to our customers' priorities, blending boutique-level agility and care with the reach and resilience of a global enterprise. Supported by strategic partnerships with SAP and other technology leaders, we empower customers to scale faster, work smarter, and build for what's next.
